

How to enable Spotify Features on Deezer Remix (w/ Pictures)

To make Spotify Features available again you should:

- Go to this link: <https://developer.spotify.com/dashboard/applications>
- Log in with your Spotify account
- Click on Create a Client ID

CREATE A CLIENT ID

- Compile the form as you like

CREATE AN APP OR HARDWARE INTEGRATION
Step 1/3

App or Hardware Name *

Your app or hardware name. Max 60 character

App or Hardware Description *

Describe your app or hardware. Max 250 characters.

What are you building? *

- I don't know
- Mobile App
- Desktop App
- Website
- Speakers
- Voice - Cortana
- Voice - Other
- TV
- Gaming Consoles
- Wearables

Check all that apply

- Click NO

CREATE AN APP OR HARDWARE INTEGRATION
Step 2/3

Are you developing a commercial integration?

Generally speaking, you have a commercial integration if you are incorporated and/or plan to monetize your app.

What does that mean?

- **You monetize if...** your app or product charges a fee to purchase, promotes using ads or utilizes a freemium model for upsells.
- **You are incorporated if...** you are legally protected as a corporate entity or company.

Note: Please note that using Spotify's tools are always subject to our [Developer Terms of Service](#) and final approvals for commercial usage will always be left up to the discretion of Spotify and its partners.

NO YES

- Tick all the things and click SUBMIT

CREATE A NON-COMMERCIAL APP
Step 3/3

- I understand that this app is not for commercial use
- I understand that I cannot migrate my app from non-commercial to commercial without permission
- I understand and agree with Spotify's Developer Terms of Service, Branding Guidelines, and Privacy Policy

SUBMIT CANCEL

- Now you should see your Client ID and Client Secret.

Client ID 395 Client Secret 75

SHOW CLIENT SECRET

Open the folder where the config files are:
Windows: %appdata%/Deezer Remix/
macOS: Library/Application Support/Deezer Remix/
Linux: /home/yourUsername/.config/Deezer Remix/
And create a file called `authCredentials.js`

Open it and copy paste this string

```
module.exports = { clientId: 'CLIENTID_HERE', clientSecret: 'CLIENTSECRET_HERE' }
```

Replace `CLIENTID_HERE` and `CLIENTSECRET_HERE` with your Client ID and Client Secret from the site.
Save the file and now you can use all the Spotify Features!
